

LUVET LABS

BRAND ONE-PAGER
V1.0 · 2026

BRAND IDENTITY GUIDE

Designed
with **care.**
Made
to **last.**

Custom 3D printing, CAD design, and rapid prototyping for the people Big Manufacturing won't talk to. Twin Cities based. New Orleans built.

FOUNDED

2026 · St. Paul, MN

CAPACITY

3× Bambu P1S w/ AMS

DESIGN STACK

Fusion 360 · CAD-Native

SPECIALTY

Repair · Prototyping · IT

Luvet Labs exists for a specific kind of customer: the inventor with a half-finished idea, the homeowner staring at a broken plastic part, the IT director who needs a custom rack mount yesterday. The work the big additive manufacturers won't touch.

The Name

Luvet is short, distinctive, and warm — a made word that sounds real. It carries the soft "love" root without saying it outright: the work we do is careful, considered, and a little bit personal. Every part we ship is one we'd be proud to put in our own home.

Labs signals what we actually do — design, iterate, prototype, solve. We're not just a print shop. We're a CAD-first practice that happens to have three printers running.

The Origin

Born on the Gulf, working in the North. The brand carries quiet southern hospitality into a market that often feels transactional and cold-quote-driven.

Where Stratasys, Protolabs, and Xometry compete on instant quotes and ISO certifications, Luvet Labs competes on conversation, craft, and the weird one-off jobs they won't even bid.

Small enough to actually pick up the phone. Skilled enough to deliver work the hobbyists can't.

"Big additive manufacturers won't print one bracket. Hobbyists can't engineer a real solution. We do both — and we do it for a quarter of the lead time."

— BRAND VOICE · INTERNAL NORTH STAR

Positioning Snapshot

Attribute	Luvet Labs
Category	Custom 3D printing, CAD design, and rapid prototyping service
Primary Customer	Solo inventors, repair-need homeowners, small IT shops, MSPs, Etsy sellers, local makers
What We Don't Do	Aerospace certification, medical-grade production, mass manufacturing
The Promise	Quote in 24 hours. Most jobs delivered in 3–7 days. Real human on every project.
The Differentiator	CAD-native shop with IT-industry domain expertise — a combination no Twin Cities competitor offers

Attribute	Luvet Labs
The Vibe	Engineer's precision, neighbor's warmth, southern hospitality, midwestern reliability

Color Palette

02 · THE WARM INDUSTRIAL SYSTEM

A six-color system built to feel professional but not corporate, warm but not casual, modern but not trendy. Every color earns its place by doing a specific job in the system.

Primary Palette

DEEP TEAL

Deep Teal

#1E5F6B · RGB 30·95·107

The Anchor. Primary brand color. Logo, headers, primary buttons, and any moment that needs to read as serious and credible. The 2026 sweet spot — professional like blue, but not invisible like blue.

WARM SAND

Warm Sand

#E8DFD0 · RGB 232·223·208

The Welcome. Background blocks, story cards, sections that need to feel inviting rather than sterile. Replaces the cold-white SaaS aesthetic with something human.

BURNT AMBER

Burnt Amber

#D97548 · RGB 217·117·72

The Spark. Accent for CTAs, link hovers, key statistics, and anything that needs to draw the eye. A subtle nod to southern warmth without ever stating it. Use sparingly — accent, not decoration.

Supporting Palette

SOFT IVORY

Soft Ivory

#FAF7F2 · RGB 250·247·242

The Canvas. Default page background. Warmer than pure white — looks photographic, not clinical. Easier on the eye for long-form reading.

SLATE CHARCOAL

Slate Charcoal

#2C2E33 · RGB 44·46·51

The Text. Body copy, footer, dark sections. A zinc-tinted near-black, never pure #000 — softer, more readable, and pairs better with warm tones than true black.

STONE GRAY

Stone Gray

#7A7973 · RGB 122·121·115

The Quiet. Secondary text, captions, dividers, metadata. A warm-leaning gray that complements the sand and ivory rather than fighting them.

Why this combination wins. Most 3D printing services use either sterile tech-blue or aggressive industrial-orange-on-black. Both are crowded and dated. The Warm Industrial system places Luvet Labs in a more sophisticated visual neighborhood — closer to architecture studios, design consultancies, and modern fintechs than to print shops. That visual gap is the brand. When a client compares your quote to two others, your materials should make the other two look generic by comparison.

The Mark

The logo is a monogram — bold "LL" in a soft-cornered square — paired with the wordmark "LUVET · LABS." The interpunct between words signals precision (think laboratory notation) without being aggressive. The mark works alone as an avatar; the full lockup works for headers, business cards, and signage.

Typography

A two-typeface system: a confident geometric sans for display, and a clean humanist sans for body. Both available free from Google Fonts.

Designed with care.

Made to last.

Display: Manrope ExtraBold / Bold

Use for: headlines, page titles, hero copy, large numbers.
Geometric, modern, with just enough warmth to avoid looking corporate-cold.

Body Copy Sample

Luvet Labs designs and prints the parts and prototypes other shops can't be bothered with. Three Bambu P1S printers, one CAD-fluent designer, and a 24-hour quote turnaround. Small jobs welcome.

Body: Inter Regular / Medium

Use for: all body copy, UI, captions, navigation. The most legible neutral sans-serif available — designed for screens, prints beautifully.

✓ DO

- Use the monogram alone as a social avatar or favicon
- Keep clear space around the logo equal to the height of one "L"
- Use Burnt Amber for the interpunct on light backgrounds
- Reverse to Ivory on Deep Teal for primary applications

✗ DON'T

- Stretch, skew, or rotate the mark
- Place the logo on busy photographs without a solid backdrop
- Recolor outside the official palette
- Drop the interpunct or use a hyphen instead

Luvet Labs writes like a competent neighbor — direct, technically accurate, warm but never corny. We use plain language, name what things actually cost, and don't pad with jargon.

Voice Pillars

WE ARE

Direct · Technical · Warm · Specific · Honest about scope · Clear on price · Confident without bragging · Quietly proud of craft

WE ARE NOT

Hyped · Buzzwordy · Falsely humble · Vague on price · "Disruptive" · "Cutting-edge" · Salesy · Apologetic about our scale

Taglines & Hooks

Designed with care. Made to last.

PRIMARY · BRAND-LEVEL

The shop that takes the small jobs.

REPAIR / HOMEOWNER AUDIENCE

CAD-native. Print-ready. Locally run.

PROTOTYPING / INVENTOR AUDIENCE

Custom brackets, mounts, and one-offs for IT pros.

MSP / HOMELAB AUDIENCE

Quote in 24. Part in your hands by Friday.

SPEED-LED / SALES

New Orleans built. Twin Cities based.

STORY-LED / ORIGIN

About Copy — Three Lengths

SHORT · 25 WORDS · FOR SOCIAL BIOS

Luvet Labs is a Twin Cities 3D printing and CAD design shop. We make repair parts, prototypes, and custom brackets for the jobs Big Additive won't take.

MEDIUM · 75 WORDS · FOR THE WEBSITE HERO

Luvet Labs is a small, CAD-native 3D printing shop based in St. Paul. We design and print the parts and prototypes the big additive manufacturers won't touch — broken appliance hardware, IT rack mounts, inventor prototypes, replacement components for things that "don't make those anymore." Three Bambu P1S printers running on AMS, a Fusion 360 license, and a 24-hour quote promise. New Orleans built. Twin Cities based.

Luvet Labs started with a simple observation: the Twin Cities has world-class industrial 3D printing — Stratasys is literally headquartered here — but almost nowhere for a regular person, a small business, or a solo inventor to get one weird part made well, quickly, and at a fair price.

We close that gap. We design in Fusion 360, print on three Bambu P1S machines with full-color AMS capability, and turn most jobs around in three to seven days. Repair parts, prototypes, custom IT and homelab brackets, small-batch product runs, reverse-engineered replacements — if it can be designed and printed, we can probably do it.

The shop is run by an IT professional and CAD designer who grew up in New Orleans and now calls the Twin Cities home. The name carries that story. Every part we make is one we'd be proud to put in our own home.

Audience & Application

05 · WHO IT'S FOR · WHERE IT GOES

Three Primary Audiences

Audience	What They Need	How We Speak To Them
Repair Customers	A specific broken part — appliance knob, drawer clip, vintage stereo dial — fixed quickly without buying a whole new product.	Plain language. Photos of before/after. "Send me a photo of the broken part. I'll quote within a day."
Solo Inventors / Etsy Sellers	1–3 design iterations of a product idea, without Protolabs' \$500 minimums or 2-week lead times.	Process-led. Show the design steps. Talk about iteration cycles, not just final price.
IT Pros / MSPs / Homelabbers	Custom rack mounts, cable management, AP brackets, branded swag for client installs, Pi enclosures.	Technical. Use the right vocabulary (1U, half-rack, PoE, Cat6 strain relief). Show you're one of them.

Brand Application Checklist

DIGITAL FIRST (MONTH 1)

- One-page service site at luvetlabs.com
- LinkedIn company page
- Instagram (work-in-progress reels)
- Facebook business page
- MakerWorld + Printables creator profiles
- Google Business Profile (St. Paul)
- Email signature with logo lockup

PHYSICAL (MONTH 2)

- Business cards (Vistaprint matte, sand background)
- Branded thank-you cards in every shipment
- Shipping labels with logo
- 3D-printed business card holders (showcase your work)
- One-page price sheet (PDF, for referral partners)
- Vinyl decal for the shop / car

Pre-Launch Verification Checklist

- **USPTO Trademark Search** — uspto.gov/trademarks · search "Luvet Labs" across classes 040 (custom manufacturing), 042 (design services), and 035 (consulting).
- **Minnesota Secretary of State** — mblsportal.sos.state.mn.us · confirm no MN business is using the name.
- **Domain Captured** — luvetlabs.com ✓ secured. Consider adding .co and .dev as backups.
- **Handle Reservation** — @luvetlabs on Instagram, LinkedIn, Facebook, X/Twitter, MakerWorld, Printables, Thingiverse.
- **Email Setup** — hello@luvetlabs.com via Google Workspace (\$7/mo) or Cloudflare Email Routing (free).
- **LLC Filing** — Luvet Labs LLC, MN Secretary of State filing fee ~\$135. EIN free from IRS.

A brand isn't your logo. It's the gap between what people expect from a 3D printing service and what Luvet Labs actually delivers. Close that gap on every job, and the brand builds itself.
